

A commutative diagram illustrating a mapping between sets and a complex plane. The diagram consists of four nodes arranged in a square:

- Top-left node: U
- Top-right node: $f(U)$
- Bottom-left node: $\mathbb{C}$
- Bottom-right node: $\mathbb{C}$

The arrows and their labels are:

- A horizontal arrow from U to $f(U)$ labeled f .
- A vertical arrow from U to $\mathbb{C}$ labeled ϕ .
- A vertical arrow from $f(U)$ to $\mathbb{C}$ labeled ϕ .
- A horizontal arrow from $\mathbb{C}$ to $\mathbb{C}$ labeled $\lambda \cdot$.

The diagram shows that the composition of f and ϕ (from U to $\mathbb{C}$) is equivalent to the composition of ϕ and $\lambda \cdot$ (from $\mathbb{C}$ to $\mathbb{C}$).
